Structure and Features

Balls roll in four rows of raceways precision-ground on an LM rail and an LM block, and end plates incorporated in the LM block allow the balls to circulate.

Each row of balls is placed at a contact angle of 45° so that the rated loads applied to the LM block are uniform in the four directions (radial, reverse-radial, and lateral directions), enabling the LM Guide to be used in all orientations.

The high-temperature type LM Guide is capable of being used at service temperature up to 150°C thanks to THK's unique technologies in material, heat treatment, and lubrication.

Maximum Service Temperature: 150°C

Use of stainless steel in the end plates and high-temperature rubber in the end seals achieves the maximum service temperature of 150°C.

Dimensional Stability

The product has undergone processing which grants it superb dimensional stability even when heated or cooled (though it does expand some at high temperatures).

Highly Corrosion Resistant

Since the LM block, LM rail, and balls use stainless steel, which is highly corrosion resistant, this model is optimal for clean room applications.

High-Temperature Grease

This model uses high-temperature grease that shows little grease-based fluctuation in rolling resistance even if the temperature changes from normal to high.

● Dimensional Stability Data

Since this model has been treated for dimensional stability, its dimensional change after being cooled or heated is only minimal.

Notes: The above data on overall length and curvature indicate dimensional change when the LM rail is cooled to normal temperature after being heated at 150°C for 100 hours.

The samples consist of high-temperature, standard, and stainless steel types of model HSR25 + 580L.

● Rolling Resistance Data in Relation to Grease

This model uses high-temperature grease that shows little grease-based fluctuation in rolling resistance even if the temperature changes from normal to high.

For the measurements above, model HSR25M1R1C1 is used.

● Thermal Characteristics of LM Rail and LM Block Materials

Specific heat capacity: 0.481 J/(g·K)

Thermal conductivity: 20.67 W/(m·K)

Average coefficient of linear expansion: $11.8 \times 10^{-6}/^{\circ}\text{C}$

Types and Features

Model HSR-M1C

The flange of the LM block has tapped holes. It can be mounted from the top or the bottom. It is used in places where the table cannot have through holes for mounting bolts.

Dimensional Table⇒ **A1-362**

LM Guide

Model HSR-M1LC

The LM block has the same cross-sectional shape as the Model HSR-M1C, but it has a longer overall LM block length (L) and a greater load rating.

Dimensional Table⇒ **A1-362**

Model HSR-M1R

With this type, the LM block has a smaller width (W) and tapped holes. It is used in places where the space for table width is limited.

Dimensional Table⇒ **A1-364**

Model HSR-M1LR

The LM block has the same cross-sectional shape as model HSR-M1R, but has a longer overall LM block length (L) and a greater load rating.

Dimensional Table⇒ **A1-364**

Model HSR-M1YR

When using two units of LM Guide facing each other, the previous model required much time to machine the table, and it was difficult to achieve the desired accuracy and adjust the clearance. The tapped holes on the side of the HSR-M1YR block simplify the structure, which drastically reduces labor time and increases accuracy.

Dimensional Table⇒ **A1-366**

Service Life

When using this product in temperatures higher than 100°C, always multiply the basic dynamic load rating by the temperature coefficient when calculating the rated service life. See **A1-67** for details.

Standard Lengths and Maximum Lengths of LM Rails

Table 1 shows the standard lengths and the maximum lengths of model HSR-M1 variations. If the maximum length of the desired LM rail exceeds these values, jointed rails will be used. Contact THK for details.

For special rail lengths, it is recommended to use a value corresponding to the G and g dimensions from the table. As the G and g dimensions increase, this portion becomes less stable, and the accuracy performance is severely impacted.
