

Rolled Ball Screw

Models JPF, BTK-V, MTF, WHF, BLK/WTF, CNF and BNT

Point of Selection **A15-8**

Options **A15-352**

Model No. **A15-369**

Precautions on Use **A15-374**

Accessories for Lubrication **A24-1**

Mounting Procedure and Maintenance **B15-104**

Lead Angle Accuracy **A15-11**

Accuracy of the Mounting Surface **A15-14**

Axial Clearance **A15-19**

Maximum Length of the Screw Shaft **A15-24**

DN Value **A15-33**

Support Unit **A15-316**

Recommended Shapes of Shaft Ends **A15-324**

Dimensions of Each Model with an Option Attached **A15-360**

Structure and Features

THK Rolled Ball Screws are low priced feed screws that use a screw shaft rolled with high accuracy and specially surface-ground, instead of a thread-ground shaft used in the Precision Ball Screws. The ball raceways of the ball screw nut are all thread-ground, thus to achieve a smaller axial clearance and smoother motion than the conventional rolled ball screw.

In addition, a wide array of types are offered as standard in order to allow optimal products to be selected according to the application.

[Achieves Lead Angle Accuracy of Class C7]

Screw shafts with travel distance error of classes C7 and C8 are also manufactured as the standard in addition to class C10 to meet a broad range of applications.

Travel distance	C7 : $\pm 0.05/300$ (mm)
	C8 : $\pm 0.10/300$ (mm)
	C10 : $\pm 0.21/300$ (mm)

(For maximum length of screw shaft by accuracy grade, see **A 15-25**.)

[Achieves Roughness of the Ball Raceways of the Screw Shaft at 0.20 a or Less]

The surface of the screw shaft's ball raceways is specially ground after the shaft is rolled to ensure surface roughness of 0.20 a or less, which is equal to that of the ground thread of the Precision Ball Screw.

[The Ball Raceways of the Ball Screw Nut are Finished by Grinding]

THK finishes the ball raceways of Rolled Ball Screw nuts by grinding, just as the Precision Ball Screws, to secure the durability and the smooth motion.

[Low Price]

The screw shaft is induction-hardened or carburized after being rolled, and its surface is then specially ground. This allows the rolled Ball Screw to be priced lower than the Precision Ball Screw with a ground thread.

[Effects of high levels of dustproofing]

The ball screw nut is incorporated with a compact labyrinth seal or a brush seal. This achieves low friction, high dust-prevention effect and a longer service life of the Ball Screw.

Types and Features

[Preload Type]

Model JPF

Specification Table⇒ **A15-288**

This model achieves zero-backlash through a constant preloading method by shifting the phase, with the central part of the nut as a spring structure.

The constant preload method allows the ball screw to absorb a pitch error and achieve a smooth motion.

Axial clearance: 0 or less

● Direction of applied load

The direction of the applied load during use must be in the recommended loading direction indicated in the figure. If a load is applied in the opposite direction, it may cause the spring structure to fracture, and therefore, the applied load must be $0.1 \times C_a$ or less during use.

[No Preload Type]

Model BTK-V

Specification Table⇒ **A15-290**

This Rolled Ball Screw feed achieves a DN value of 100,000 by using a new circulation structure.

Since the nut outer diameter and the mounting holes of this model are dimensionally interchangeable with the previous model BTK, model BTK can be replaced with this model.

Model MTF

A miniature type with a screw shaft diameter of $\phi 6$ to $\phi 12$ mm and a lead of 1 to 2 mm.

Specification Table \Rightarrow **A15-290**

Model WHF

This Ball Screw for high-speed feed achieves a DN value of 100,000 by using a new circulation structure.

Since the nut outer diameter and the mounting holes of this model are dimensionally interchangeable with the previous model WTF, model WTF can be replaced with this model. (WHF1530, WHF2040 and WHF2550)

Specification Table \Rightarrow **A15-290**

Models BLK/WTF

Using an end-cap method, these models achieve stable motion in a high-speed rotation.

Specification Table \Rightarrow **A15-290**

Model CNF

Specification Table⇒ **A15-290**

With a combination of 4 rows of large-lead load-
ed grooves and a long nut, a long service life is
achieved.

Square Ball Screw Nut Model BNT

Specification Table⇒ **A15-296**

Since the mounting screw holes are machined
on the square ball screw nut, this model can
compactly be mounted on the machine without
a housing.

Note) The ball screw nut and the screw shaft of model JPF are not sold separately.

The basic load rating corresponds to the recommended loading direction.

If a load is applied in the opposite direction, the value must be 0.1 x Ca or less during use (see [A15-284](#)).

Note) Model MTF cannot be attached with seal.

Model MTF is only sold as sets (ball screw nut and screw shaft).

Model MTF is applied only with anti-rust oil.

WHF is available on a made-to-order basis. If planning to use this model, contact THK.

Model Number Coding

Model number coding

Ball Screw Nut

BTK1405V-2.6 ZZ

Model number

Seal symbol

no symbol: without seal

ZZ: brush seal attached to both ends of the ball screw nut (see [A15-352](#))

Screw Shaft

TS 14 05 +500L C7

Accuracy symbol (see [A15-12](#)) (no symbol for class C10)

Overall screw shaft length (in mm)

Lead (in mm)

Screw shaft outer diameter (in mm)

Symbol for rolled ball screw shaft

Combination of the Ball Screw Nut and the Screw Shaft

BTK1405V-2.6 ZZ +500L C7 T

Model number

Symbol for rolled shaft

Accuracy symbol (see [A15-12](#)) (no symbol for class C10)

Overall screw shaft length (in mm)

Seal symbol

no symbol: without seal

ZZ: brush seal attached to both ends of the ball screw nut (see [A15-352](#))

Rolled Ball Screw model JPF

JPF1404-4 RR G0 +500L C7 T

Model number

Symbol for rolled shaft

Accuracy symbol (see [A15-12](#)) (no symbol for class C10)

Overall screw shaft length (in mm)

Axial clearance symbol

Seal symbol

no symbol: without seal

RR: Labyrinth seal attached to both ends of the ball screw nut (see [A15-352](#))
