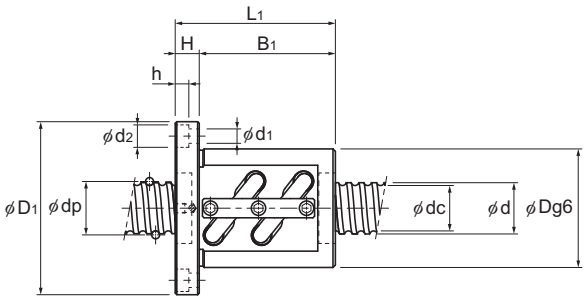
Model number coding

SBN4012V-5 QZ RR G0 +1200L C5

- SBN4012V-5: Model No.
- QZ: Contamination protection accessory symbol (*1) — With QZ lubricator (No code without QZ lubricator)
- RR: Symbol for Clearance in the axial direction (G0 for all SBN-V variations)
- G0: Overall screw shaft length (in mm)
- +1200L: Accuracy symbol (*2)
- C5: Accuracy symbol (*2)

(*1) See A15-326. (*2) See A15-12.



Unit: mm

Axial Clearance

Unit: mm

Clearance symbol	G0
Axial Clearance	0 or less

Note)The overall length of the nut will increase when equipping the QZ lubricating device. See **A15-336** for further details.
It is not possible to chamfer both ends of the screw shaft. When designing your system this way, contact THK.

The rigidity values in the table represent spring constants, each obtained from the load and the elastic deformation when providing a preload equal to 10% of the basic axial dynamic load rating (Ca) and applying an axial load three times greater than the pre-load.
These values do not include the rigidity of the components related to mounting the ball screw nut. Therefore, it is normally appropriate to regard roughly 80% of the value in the table as the actual value.
If the applied preload (Fa_0) is not 0.1 Ca, the rigidity value (K_N) is obtained from the following equation.

$$K_N = K \left(\frac{Fa_0}{0.1Ca} \right)^{\frac{1}{3}}$$

K: Rigidity value in the dimensional table

Options⇒A15-325
