

High Thrust Linear Motor Actuator

GLM20AP

High Thrust Linear Motor

GLM

Flat type with core

* The connector box is available for GLM20AP only.

An AC linear server motor with core is used for the GLM. Coils are wound to the ferrite core, generating an extremely strong magnetic field so that characteristics such as high thrust and high acceleration/deceleration are exhibited even with a small volume.

Caged Ball LM Guide SSR Structure Diagram

The Caged Ball LM Guide SSR eliminates wear of the ball caused by mutual friction when using the caged ball, and the LM guide achieves excellent high speed performance with low noise, good sound quality, and a long-term maintenance-free long life.

Features

1 High speed & high acceleration/deceleration

Because linear motors can convert electromagnetic force directly to linear motion, high speed and high acceleration/deceleration are achieved even in the long stroke.

Maximum speed: 3m/s (4m/s for GLM10 only)

Acceleration/deceleration: 19.6m/s² (2G)

* Vary depending on the specifications, conditions, etc.

2 High positioning accuracy

The actuator using the LM guide is controlled fully closed by the linear encoder, achieving high positioning repeatability.

3 Long stroke support

The linear motor actuator can support long strokes which cannot be realized with a ball screw drive.

For GLM15AP/20AP/25, strokes of 4m or more are also supported by joint base configuration.

4 Multi-slider support

Setting multiple sliders on the base of one axis, it is possible to control each independently.

Conformance to overseas standards

CE

UL

Adapted driver

Movable with the following drivers. Refer to P.17 regarding details for each driver.

Driver TDP

A high functional driver
for auto tuning support.

GLM20AP

Basic Specifications

Item		Motor type	S type										M type										L type							
Adapted driver	TDP	Capacity	450W										750W										1kW							
		Main circuit power voltage	200V AC single-/three-phase					100V AC					200V AC single-/three-phase					100V AC					200V AC three-phase							
		Control circuit power voltage	200V AC single-phase					100V AC					200V AC single-phase					100V AC					200V AC single-phase							
Maximum thrust *1 [N]			336					325					618					562					954							
Rated thrust *1 [N]			118					113					220					197					344							
Resolution [μm]			10.0	5.0	1.0	0.5	0.1	10.0	5.0	1.0	0.5	0.1	10.0	5.0	1.0	0.5	0.1	10.0	5.0	1.0	0.5	0.1	10.0	5.0	1.0	0.5	0.1			
Maximum speed *2 [m/s]			3.0			1.5		0.3		2.0			1.5		0.3		3.0			1.5		0.3		2.0			1.5		0.3	
Positioning repeatability [μm]			±10	±5	±1			±10	±5	±1			±10	±5	±1			±10	±5	±1			±10	±5	±1					
Maximum transportable weight *3 [kg]			46.1					41.0					86.1					71.0					134.6							
Assumed transportable weight *4 [kg]			7.7					6.0					15.0					11.0					24.5							

^{*1} When the average temperature of the armature winding is 90°C under an ambient temperature of 20°C.

^{*2} The maximum speed varies depending on the resolution.

Example: The maximum speed is 0.3m/s when the motor type is S, the driver model number is TDP 200V AC, and the resolution is 0.1 μ m.

^{*3} The specifications of the operating speed, acceleration/deceleration, etc. are limited by the load weight. See "GLM20AP Selection Method" on P.31.

The maximum transportable weight is a weight that can be driven at an approximate acceleration of 0.5G.

^{*4} The assumed transportable weight is a weight that can be driven for a certain stroke at a duty ratio of 50% with an approximate acceleration of 2G and a maximum speed reached of 1.0m/s.

Depending on the operating conditions, the movable weight may change under the influence of the thrust and speed characteristics.

Characteristics

[200V AC specifications]

Motor type: S type

Motor type: M type

Driver: TDP-075CU-200AC-GA20MU

Motor type: L type

Driver: TDP-100CU-200AC-GA20LU

Maximum area
Continuous area

[100V AC specifications]

Motor type: S type

Driver: TDP-045CU-100AC-GA20SU

Motor type: M type

Driver: TDP-075CU-100AC-GA20MU

Note) The thrust and speed characteristics shown above are values that take into consideration the sliding resistance component of the LM guide due to the slider attractive force and slider weight.

Transportable Weight and Acceleration

Note) At a maximum speed reached of 1.0m/s, the unit can be driven for a certain stroke at a duty ratio of 50% at this weight. For details about selection, see "GLM20AP Selection Method" on P.31.

GLM20AP

Model Configuration

Model	Number of sliders/motor type	Stroke	Encoder/resolution	Magnetic pole sensor	Driver
GLM20AP	S	0490	T01K	J	TDP20
(1)	(2)	(3)	(4)	(5)	(6)
GLM20AP	S: S type M: M type L: L type 2S: S type × 2 (multi-slider) 2M: M type × 2 (multi-slider) 2L: L type × 2 (multi-slider)	0130: 130mm to 2650: 2650mm Refer to Table 1. Stroke List. * Refer to the GLM20AP dimension diagram (→ P.9) for details.	T01K: 1.0μm R01K: 1.0μm R500: 0.5μm R100: 0.1μm H01K: 1.0μm G10K: 10.0μm G05K: 5.0μm Encoders can be selected vary depending on the driver used. Refer to Table 2. Encoder List. Note) The maximum speed and positioning repeatability of the actuator vary depending on the encoder resolution.	J: With magnetic pole sensor N: Without magnetic pole sensor (5) The specification without a magnetic pole sensor detects the magnetic pole by servo ON input. While detecting the magnetic pole, the rod fluctuates a few millimeters from side to side for about 10 seconds. The magnetic pole detection may fail if an excessive load is applied to the slider, the work loaded on the slider has a barycentric position that is overhung, or an external force or high resistance acts on the slider. In this case, the specification with a magnetic pole sensor is recommended.	TDP20: Driver TDP 200V AC specification TDP10: Driver TDP 100V AC specification (6) Driver + input power voltage Example: TDP20 TDP: Driver TDP 20: 200V AC specification

Table 1. List of strokes

Stroke signal	S type	0130	0310	0490	0670	0850	1030	1210	1390	1570	1750	1930	2110	2290	2470	2650
	M type	-	0160	0340	0520	0700	0880	1060	1240	1420	1600	1780	1960	2140	2320	2500
	L type	-	-	0200	0380	0560	0740	0920	1100	1280	1460	1640	1820	2000	2180	2360
Base length [mm]		400	580	760	940	1120	1300	1480	1660	1840	2020	2200	2380	2560	2740	2920
Total length of actuator [mm]		420	600	780	960	1140	1320	1500	1680	1860	2040	2220	2400	2580	2760	2940

Note 1) The stroke is different if a multi-slider is used. Contact THK for details.

Note 2) The standard base length is recommended because the design complies with the magnet length.

Note 3) Maximum length of the single base is 4400mm. For joint base configuration, select an encoder made by Magnescale Co., Ltd. or HEIDENHAIN Inc..

Table 2. List of encoders

Driver	(4) Encoder/resolution	Encoder manufacturer	Model	Positioning repeatability [μm]	Maximum speed [m/s]
TDP	T01K	THK Co., Ltd.	MES-HM-1	±1	3.0
	R01K		RGH22X		
	R500		RGH22Z		
	R100	RENISHAW	RGH22Y	±1	1.5
	H01K		LIDA277		
	G10K				
	G05K	Magnescale Co., Ltd.	PL25	±10	3.0
				±5	

Note 1) The maximum speed and positioning repeatability of the actuator vary depending on the encoder resolution.

Note 2) The resolution is the value after multiplying by 4.

Note 3) If a Magnescale made encoder is selected, the interpolator and magnetic switch are attached to the body.

Table 3. List of adapted drivers

(6) Driver	Motor type	Attached driver
TDP20	S type	TDP-045CU-200AC-GA20SU-(1) ^{*1} -(2) ^{*2}

Medium and large capacity driver for single axis

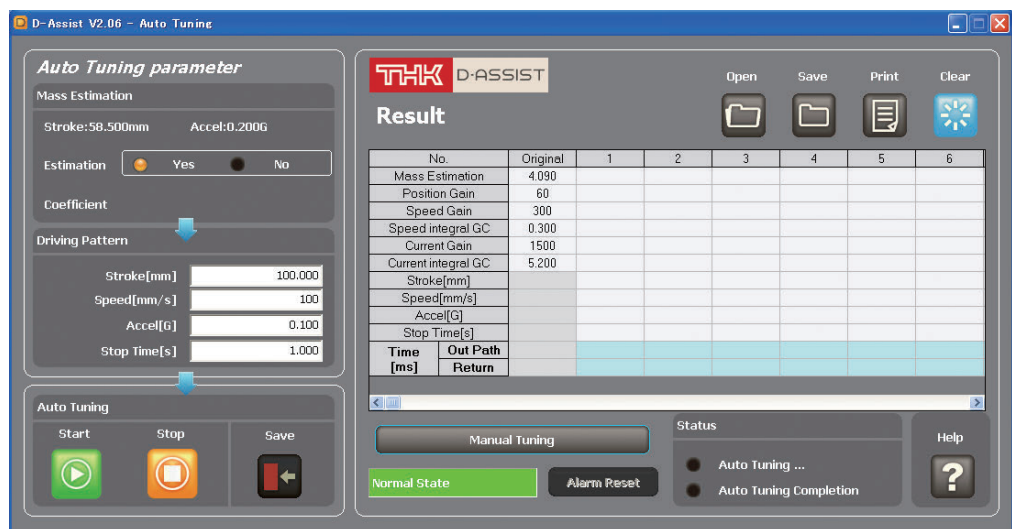

TDP

Features

1 Auto-tuning

Auto-tuning functionality built-in. Helps realize reductions in adjustment work.

2 Vibration suppression function during stop

When the linear motor is stopped, unique vibrations (hunting) from the servo motor are generated. The vibration suppression function during stop makes it possible to suppress these vibrations.

Without vibration suppression function during stop

With vibration suppression function during stop

3 East-to-use setup tool

With the PC software D-Assist Ver. 2, it is easy to set parameters, etc.

4 USB communication function

By using a USB 2.0 to communicate with a PC, high speed communication is possible.

Setup tool

The PC software D-Assist Ver. 2 is required when changing the parameters for driver TDP.

PC software D-Assist Ver. 2

Features

Easy setting
on PC

Parameter settings can
be performed on your PC.

Functions

- Auto-tuning function setting
- Parameter checking / changing / writing / saving
- Monitoring (I/O, position, alarm, effective load factor)
- Logging (Position / speed / current waveform display)
- Jogging/inching movement
- Communication speed settings
- Supported OS: Windows 8, 10

Note) When using D-Assist, the PC communication cable K232-01 (sold separately) or a USB cable are required.

USB cable (commercially available)*

Computer communication cable K232-01

* For the USB cable, use a commercially available product with a ferrite core.

TDP

Medium and large capacity driver for single axis

Specification (main circuit voltage 100V AC)

Model	Model number		TDP			
	Capacity		100W	200W	450W	750W
	Appearance

Details of Setup Tools

D-Assist Ver.2

Support for realizing optimal motion

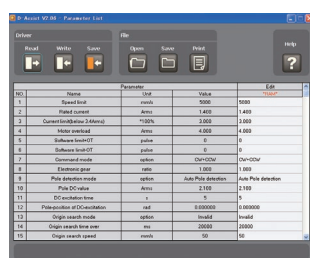

The D-Assist is a user support tool.

Provides support for setting of driver functions or linear motor adjustments.

*D-Assist can be downloaded free of charge (<https://tech.thk.com/>).

Functions

Parameter settings

Logging

Monitor display

Parameter settings

Confirmation/alteration/saving of each parameter can be performed.

Motion confirmation

Jogging and inching movement, as well as auto tuning can be performed.

Monitor display

I/O and positional directive/current position can be displayed.

Logging

Waveforms for current speed and location deviation, etc., can be obtained.

Support for multiple languages

Three display languages are available.

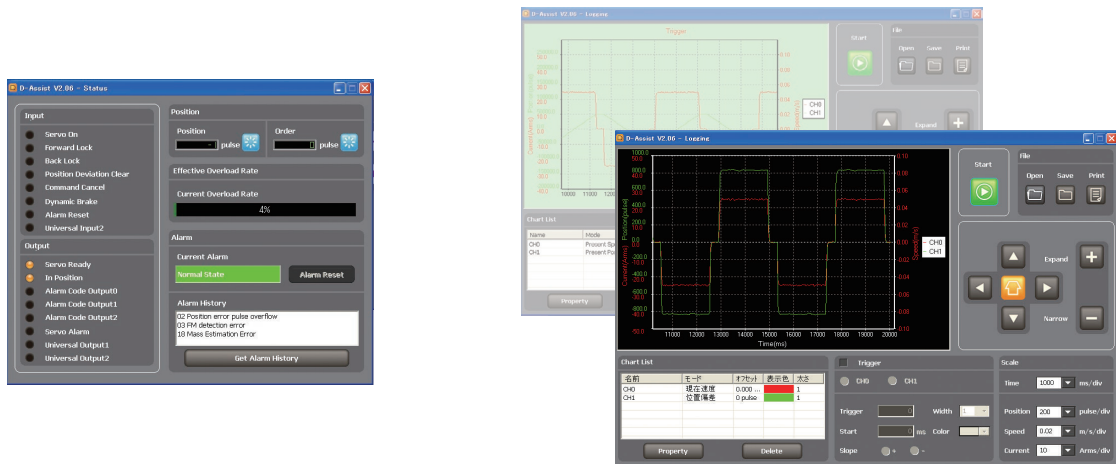

Japanese / English / Chinese (simplified)

Help function

An explanation of parameters, as well as causes and remedial procedures for alarm displays can be confirmed.

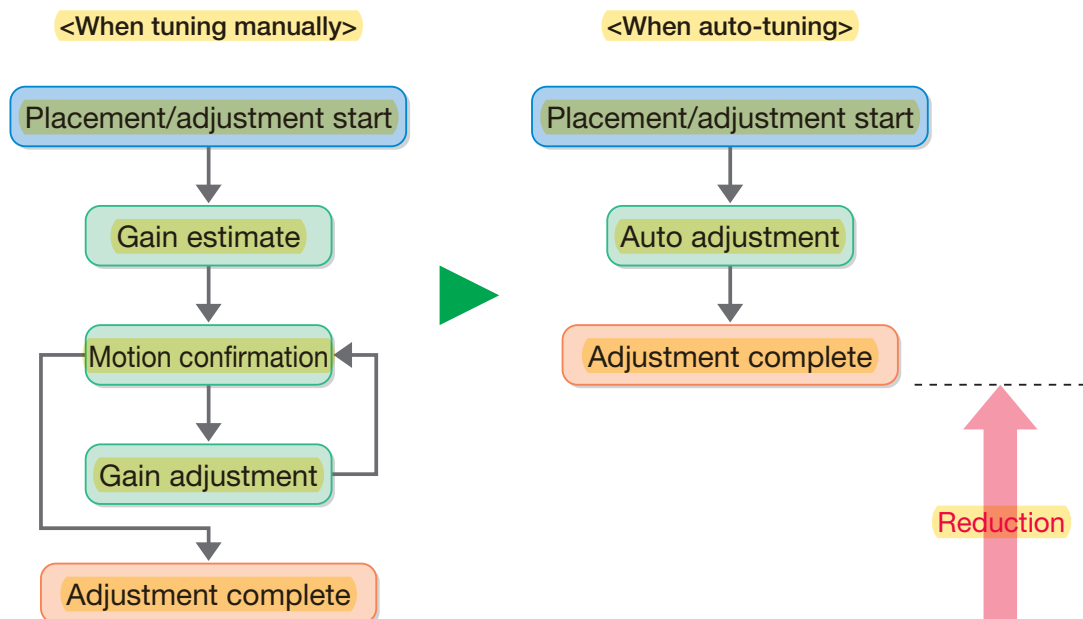

User-friendly Interface

The monitor and icon designs have been updated. Intuitive operation has been made possible, making this tool easier to use.

Supports Servo Adjustments

Auto-tuning functionality built-in. Helps realize reductions in adjustment work.

Cable Specification

KDK-**-CU: Power cable

KET-**-CU: Optical linear encoder cable

KJET-**-CU: Optical linear encoder/magnetic pole sensor cable

CK-**: Magnetic linear encoder cable

KSET-01-CU: Connection cable between interpolator and driver

KSJT-**-CU: Connection cable between interpolator and magnetic pole sensor

CE09-**: Origin detector cable

KEK-**-CU: Optical linear encoder cable

GLM20AP Selection Method

Select the linear motor following the procedure below.

* If you provide the usage conditions, THK can select a recommended model number.
Please contact THK.

1. Evaluate the maximum thrust ratio

Make sure that the maximum thrust of the motor exceeds the required thrust for operations.

It is recommended to use with **80% or less** of the maximum thrust by load fluctuations into account.

2. Evaluate the RMS thrust ratio

Make sure that the rated continuous thrust of the motor exceeds the required RMS thrust.

It is recommended to use with **70% or less** of the rated continuous thrust by taking load fluctuations into account.

* It is recommended to use with 60% or less of the the rated continuous thrust when using the actuator in a ceiling mount.
Please contact THK for details.

3. Confirm the specifications of the selected model number

Check the detailed specifications of the model number selected using the above process, to ensure that external dimensions, stroke, maximum speed, resolution and positioning repeatability all satisfy the requirement.

4. Selection of regenerative resistor

A regenerative resistor may be required depending on the operating conditions.

Check the "GLM20AP Instruction Manual" and Evaluation of regenerative resistor (→ P.36) for the selection method.

Calculation conditions

m_1	Payload	[kg]
m_2	Slider mass	[kg]
V	Motion speed	[m/s]
g	Gravitational acceleration (9.807m/s ²)	
μ	Friction coefficient	
α	Acceleration	[m/s ²]
L	Stroke	[m]
P	Motor attraction force	[N]
f	Sliding resistance of LM block	[N]
n	No. of LM blocks being used	
T	1 cycle time	[s]
t_1	Acceleration time	[s]
t_2	Constant speed time	[s]
t_3	Deceleration time	[s]
t_4	Stop time	[s]

Data for selection

Motor type	S type	M type	L type
Slider mass: m_2 [kg]	5.3 (5.1)	9.1 (8.9)	12.9 (12.7)
Motor attraction force: P [N]	1232	2547	3728
No. of LM blocks being used: n [pcs]	4	6	8
Sliding resistance of LM block: f [N]	3.7		
Friction coefficient: μ	0.01		
Maximum load capacity [kg] * ¹	46.1	86.1	134.6
Estimated load capacity [kg] * ²	7.7	15.0	24.5

Note: The values in () are for the specifications without the magnetic pole sensor.

*¹ Speed or acceleration/deceleration may be reduced by the payload mass. See "GLM20AP Selection Method" on Pages 31 to 35.

The maximum load capacity is the mass that can be driven with the acceleration of approx. 0.5G.

*² The estimated load capacity is the mass that can be driven with the acceleration of approx. 2G, with the maximum speed of 1.0m/s, and at a duty factor of 50% of a constant stroke.

However, operable mass may vary as it may be affected by thrust-speed characteristics depending on speed.

Table 1. Permissible driver regenerative energy

Driver model no.	Permissible regenerative energy E_2 [J]	Minimum permissible resistance [Ω]	Regenerative power [W]			
			RH120N 100Ω	RH150N 100Ω	RH220N 100Ω	RH300CN 100Ω

TDP-075CU-200AC-GA20MU	13.1	100	70	90	120	200
TDP-100CU-200AC-GA20LU	19.7	100	70	90	120	200

Table 2. External regenerative resistor and reference model for reference

Name	Type	Specifications	Manufacturer
Regenerative resistor	RH***N 50/100Ω *	Without thermostat	Iwaki Musen Kenkyusho
	RH***N 50/100Ω * - *** B	With thermostat (external)	
Female plug: 2-pole Pin pitch: 5.08mm	231-302/026-000		WAGO

Note: * under the Type column of the regenerative resistor indicates, from the left toward the right, the power, permissible resistance, and thermostat temperature, respectively. For details, refer to the manufacturer's catalog.

Linear motor series

Evaluating the maximum thrust ratio

The required maximum thrust F_{\max} is the largest value out of the values calculated by the following three formulas:

Load force: F [N]

$$F = \mu \times m_1 \times g$$

Thrust during acceleration: F_a [N]

$$F_a = (m_1 + m_2) \times \alpha + F$$

Thrust during deceleration: F_{d1} [N]

$$F_{d1} = (m_1 + m_2) \times \alpha - F$$

Required maximum thrust F_{\max} : Maximum value of F , F_a and F_{d1} above

Find the maximum thrust F_{peak} of the actuator at the motion speed from the thrust-speed characteristics chart in product specifications (→ P.5).

Maximum thrust ratio (%): $\frac{F_{\max}}{F_{\text{peak}}} \times 100$ 80% or less is recommended.

Evaluating the RMS thrust ratio

Calculate the RMS (root-mean-square) thrust from the load force, thrust during acceleration, and thrust during deceleration with respect to each duration.

RMS thrust: F_{rms} [N]

$$F_{\text{rms}} = \sqrt{\frac{F_a^2 \times t_1 + F^2 \times (t_2 + t_4) + F_{d1}^2 \times t_3}{T}}$$

Also, from the motion profile, average speed: V_{ave} is calculated.

Average speed: V_{ave} [m/s]

$$V_{\text{ave}} = \frac{L}{T \text{ (1 cycle time)}}$$

Find the rated continuous thrust F_{cont} of the motor from the thrust-speed characteristics chart in product specifications (→ P.5).

RMS thrust ratio (%): $\frac{F_{\text{rms}}}{F_{\text{cont}}} \times 100$ 70% or less is recommended.

Evaluating the regenerative resistor

Use the following formula to calculate the thrust during deceleration.

Thrust during deceleration: F_{d2} [N]

$$F_{d2} = (m_1 + m_2) \times \alpha - [(m_1 + m_2) \times g + P] \times \mu + f \times n$$

Regeneration energy: E_1 [J]

$$E_1 = F_{d2} \times t_3 \times \frac{V}{2}$$

Check the permissible regenerative energy E_2 of the driver to be used. (→ P.32 Table 1)

If $E_2 < E_1$, regeneration resistor is required.

Required capacity of regenerative resistor: W_K [W]

$$W_K = \frac{(E_1 - E_2)}{0.2 \times T}$$

Example of Selection

The examination below shows that if GLM20AP-S type can drive a payload of 10kg along the following motion profile:

Selection model	: GLM20AP-S type 200V AC specifications without magnetic pole sensor
Payload	: $m_1 = 10$ [kg]
Slider mass	: $m_2 = 5.1$ [kg]
Motion speed	: $V = 1.0$ [m/s]
Acceleration	: $\alpha = 10$ [m/s ²]
Stroke	: $L = 1.0$ [m]
Friction coefficient	: $\mu = 0.01$
Gravitational acceleration	: $g = 9.807$ [m/s ²]

(1) Evaluating the required maximum thrust ratio

The required maximum thrust is the largest value out of the values calculated by the following three formulas.

Load force : $F = \mu \times m_1 \times g = 0.01 \times 10 \times 9.807 = 1.0$ [N]

Thrust during acceleration : $F_a = (m_1 + m_2) \times \alpha + F = (5.1 + 10) \times 10 + 1.0 = 152.0$ [N]

Thrust during deceleration : $F_{d1} = (m_1 + m_2) \times \alpha - F = (5.1 + 10) \times 10 - 1.0 = 150.0$ [N]

From the above calculation results:

Required maximum thrust: $F_{\max} = F_a = 152.0$ [N]

Thrust-speed characteristics chart (Figure) for GLM20AP-S type shows that the thrust of the motor's maximum thrust:

F_{peak} (at speed = 1.0m/s) = 325 [N]

Therefore, the ratio of the required maximum thrust to the motor's maximum thrust is:

$$\frac{F_{\max}}{F_{\text{peak}}} \times 100 = \frac{152}{325} \times 100 = 47[\%](\leq 80\%)$$

Motor type : S type
Driver : TDP-045CU-200AC-GA20SU

Figure: Thrust-speed characteristics chart

(2) Evaluating the RMS thrust ratio

Calculate the RMS (root-mean-square) thrust from the load force, thrust during acceleration, and thrust during deceleration with respect to each duration.

RMS thrust:

$$F_{rms} = \sqrt{\frac{F_a^2 \times t_1 + F^2 \times (t_2 + t_4) + F_d^2 \times t_3}{T}}$$

$$= \sqrt{\frac{152.0^2 \times 0.1 + 1.0^2 \times (0.9 + 0.5) + 150.0^2 \times 0.1}{1.6}}$$

$$= 53.4 \text{ [N]}$$

Also, from the motion profile, average speed : V_{ave} is calculated:

$$V_{ave} = \frac{L}{T} = \frac{1.0}{1.6} = 0.625 \text{ [m/s]}$$

Thrust-speed characteristics chart for GLM20AP-S type shows that the thrust of the motor's rated continuous thrust:

F_{cont} (at the time of average speed 0.625m/s) = 111.5 [N]

Therefore, the RMS thrust ratio for the rated continuous thrust is:

$$\frac{F_{rms}}{F_{cont}} \times 100 = \frac{53.4}{111.5} \times 100 = 48\% (\leq 70\%)$$

As the result above, of the maximum thrust ratio and RMS thrust ratio, this application shall be concluded operative.

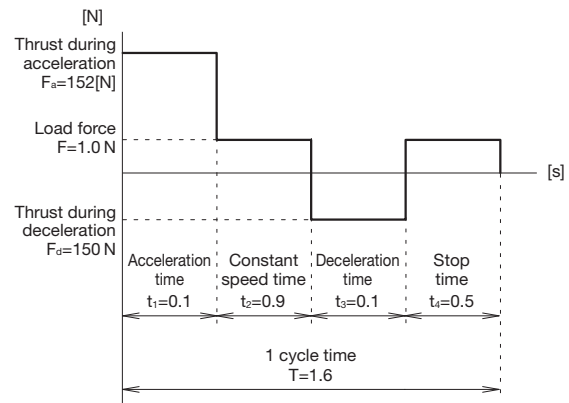

Figure: Thrust and time

Motor type : S type

Driver : TDP-045CU-200AC-GA20SU

Figure: Thrust-speed characteristics chart

(3) Evaluating the regenerative resistor

Determine whether or not a regenerative resistor is required, by comparing the value calculated from the thrust during deceleration, deceleration time and motion speed with the permissible regenerative energy of the driver.

Use the following formula to calculate the thrust during deceleration.

Thrust during deceleration : $F_{d2} = (m_1 + m_2) \times \alpha - [(m_1 + m_2) \times g + P] \times \mu + f \times n = 122.4 \text{ [N]}$

Motor attraction force : $P = 1232 \text{ [N]}$

Sliding resistance of LM block : $f = 3.7 \text{ [N]}$

No. of LM blocks : $n = 4$ (for GLM20AP-S)

Deceleration time : $t_3 = 0.1 \text{ [s]}$

Cycle time : $T = 1.6 \text{ [s]}$

Motion speed : $V = 1.0 \text{ [m/s]}$

Regenerative energy in the above case: $E_1 = F_{d2} \times t_3 \times \frac{V}{2} = 6.12 \text{ [J]}$

From Table 1 on P.31, the permissible regeneration of the driver being used (TD-045CU-200AC-GA20SU) is:

$E_2 = 4.5 \text{ [J]}$

Because $E_2 < E_1$, an external regenerative resistance is required.

The required capacity of the external regenerative resistor is: $W_k = \frac{(E_1 - E_2)}{0.2 \times T} = 5.06 \text{ [W]}$

The 0.2 term in the above formula is the value where the load factor for the external regenerative resistor is 20%.

Because the required capacity of the external regenerative resistor is 5.06W, select a recommended regenerative resistor model number with the capacity of 5.06W or more.

* Minimum permissible resistance of TDP-045CU-200AC-GA20SU = 100 [Ω]

Therefore, select the RH120N 100Ω (70W) [Iwaki Musen Kenkyusho].

Note 1: Check with the manufacturer for detailed specifications of the external regenerative resistor, including load characteristics and thermostat specifications.

Note 2: If an external regenerative resistor is required, the customer is to provide the connector (→ P.32 Table 2).

Product Usage Example

Laser marking

Processing / Assembly

Model Number Used

CSKR GLM

CSKR and GLM are used for the laser moving section. By using a clean series CSKR and GLM which generates little dust with non-contact drive, use corresponding to a clean room is possible.

Printer

Other

Model Number Used

GLM LM guide

GLM is used for the head moving section. High resolution printing is possible using a high accuracy, high resolution GLM.

LCD glass inspection equipment

Inspection

Model Number Used

KR GLM

Using a GLM that supports long strokes and high speed, larger works with an improved takt time have been achieved.

Dispenser

Processing / Assembly

Model Number Used

SKR GLM

SKR and GLM are used for the dispenser. Painting in smooth motions with no irregularities is possible.

Pick and press

Transport

Model Number Used

GLM SKR

GLM is used for the gantry moving section, and SKR is used for the vertical axis. Long stroke motions at high speeds and with high acceleration/deceleration are made possible by utilizing the properties of the linear motor series, helping realize reductions in takt time.

Glass board inspection device

Inspection

Model Number Used

GLM SKR

GLM and SKR are used for the camera moving section of the inspection equipment. The gantry structure can also support large scale work.

Glossary

Maximum thrust

Indicates the largest value of the force that the slider can generate instantaneously.

Magnetic pole sensor

The sensor that identifies N and S poles of the magnet. This is used to detect the relative position between the coil and polarity of the permanent magnet.

Optical linear encoder

A position detector that detects the position of the slider by using light (laser light). This is used for applications that require high precision and high resolution.

Magnetic linear encoder

A position detector that detects the position of the slider by using magnetism. This possesses superb environmental resistance compared to the optical type.

CE compliance

Statutory safety logo for the products sold in the EU region. For the unit products such as drivers, etc., obtaining the CE compliance approval became fully compulsory from January 1996 by the EMC directive and low voltage directive.

(1) EMC Directive

- Immunity test: Capacity to withstand noise from outside
- Emission test: Capacity to reduce the release of noise to outside

(2) Low Voltage Directive

- Requirement of electric safety for the electric products that are operated by the power source of 50 to 1000V AC and 75 to 1500V DC.

RoHS Directive

This is a hazardous substances control act enforced by EU on July 1, 2006, prohibiting electric and electronic equipment to contain the specified hazardous substances. If the products contain the hazardous substances that are controlled by this directive, they cannot be sold within the EU region.

UL Standard

UL stands for Underwriters Laboratories Inc., a nonprofit organization in the United States. The UL standard created by UL has garnered public trust as the highest authority for safety standards, and UL Marking is used by many state and local governments in the US.

UL has been approved as the certification and testing agency in Canada by the Canadian Standards Association, and is recognized throughout all states in Canada.

If the products are evaluated in accordance with the safety standards of both America and Canada, and prove that they conform to the standards, they can bear UL Marking, c-UL Marking, or a combination of these.

Rated continuous thrust

Indicates the force that the slider can continuously generate.

Maximum load capacity

Indicates the maximum mass that can be transferred by loading onto the actuator.

* THK defines the maximum load capacity as the mass that can be transferred with approx. 0.5G acceleration. For actual selection, see Selection Method (P.27 to 33) in this catalog and please contact THK.

Resolution

Minimum travel distance that can be set.

Note: This does not guarantee the positioning accuracy.

Positioning repeatability

Position to a given point from the same direction seven times, measure the stopping points and then calculate the value of half the maximum difference of the reading. Perform this measurement at the center and at both ends of the travel distance; the largest value becomes the measurement value, and the positioning repeatability is expressed by placing the symbol "±" next to the value of half the maximum difference.

= 1/2 of the maximum difference between t_1 t_2 ... t_7

THK green procurement

THK Group, through the development of its business activities as well as the social life of each employee, acknowledges that we are deeply related to the global environment, and thus would like to effectively tackle reducing environmental impact. When procuring raw materials and parts used in the production of the products, or those indirect materials and tools used in the production processes, THK Group implements the measures to consider reducing their impact on the environment.

Precautions on Use

● Environment

- The wrong environment can cause failure for the actuator and driver. The best places to use the device are as follows:
- For actuators, an environment with a room and ambient temperature from 0 to 40 °C and humidity of no more than 80% RH that will not expose the product to freezing or condensation.
- For drivers, an environment with a room and ambient temperature from 0 to 50 °C and humidity of no more than 90% RH that will not expose the product to freezing or condensation.
- A place free from corrosive gas or flammable gas.
- Places where none of the following are flying around: iron particles, or any other conductive particles, dust, oil mist, cutting fluid, water, salt, organic solvents.
- Places that are not exposed to direct sunlight or radiant heat.
- Places where no strong electric fields or strong magnetic fields occur.
- Places where vibration or impact are not transmitted to the unit.
- Places that are easy to inspect and clean.

● Safety Precautions

- This product consists mostly of heavy items (20 kg or more). When moving heavy items, use 2 or more people or moving equipment. Otherwise, injury or damage may occur.
- When transporting and installing this unit, mount the supplied eye nut to the base and attach the slider fixing screw. Always remove the eye nut and slider fixing screw when operating the actuator.
- Do not drop or knock this product. Doing so may cause injury or damage the unit.
- Unnecessarily disassembling this product may allow foreign objects to enter and reduce functionality. Also, there is a risk of electric shock from the driver.
- The PL seal is attached to the magnetic plate, the end plate, the slider and the connector box of the actuator unit.
- The magnetic plate (stator) is a very powerful magnet. Keep magnetic bodies (particularly metals) away from the magnet plate. There is a risk of getting the finger(s) jammed between the metal body and the magnet due to the attractive force of the magnet. Also, persons using cardiac pacemakers should absolutely stay away from the magnet.
- Never touch the moving section of the actuator when it is energized. Also, when the product is in motion, or in a state of readiness for motion, do not enter the movement zone of the actuator.
- When carrying out installation, adjustment, inspection or maintenance of the actuator unit, driver or connected associated devices, always remove all plugs from the power sockets, and use locking or safety plugs etc. so that no one but an operator can turn on the power again. Also, display a notice explaining what work is in progress in a position that is readily seen.
- If two or more people are involved in the operation, confirm the procedures such as sequences, signs, and abnormalities in advance, and appoint another person for monitoring the operation.
- Read the manual carefully, understanding the content properly, and be sure to observe all safety precautions.

High Thrust Linear Motor Actuator **GLM20AP**

- “LM GUIDE,” “Caged Ball,” and “” are registered trademarks of THK CO., LTD.
- The actual products may differ from the pictures and photographs in this catalog.
- Outward appearances and specifications is subject to change without notification for purposes of improvement, please inquire before using them.
- Although great care has been taken in the production of this catalog, THK will not take any responsibility for damage resulting from typographical errors or omissions.
- For exports of our products and technologies and sales for export, our basic policy is to comply with the Foreign Exchange and Foreign Trade Act and other laws and regulations. Please consult us in advance if you want to export our products by the piece.
