# KSF

The adoption of a large diameter ball screw enables both **long service life as well as improved process time via high-speed and high-acceleration/deceleration**

KSF is a compact, high-rigidity, high-precision actuator. An inner block structure integrated with an LM block and ball screw nut inside of a high-rigidity U-shaped cross-section outer rail.

Moreover, as A/B housings act as support units and the inner block can act as a table for overall cost reductions due to largely eliminated design and processing time.

## Product Usage Example

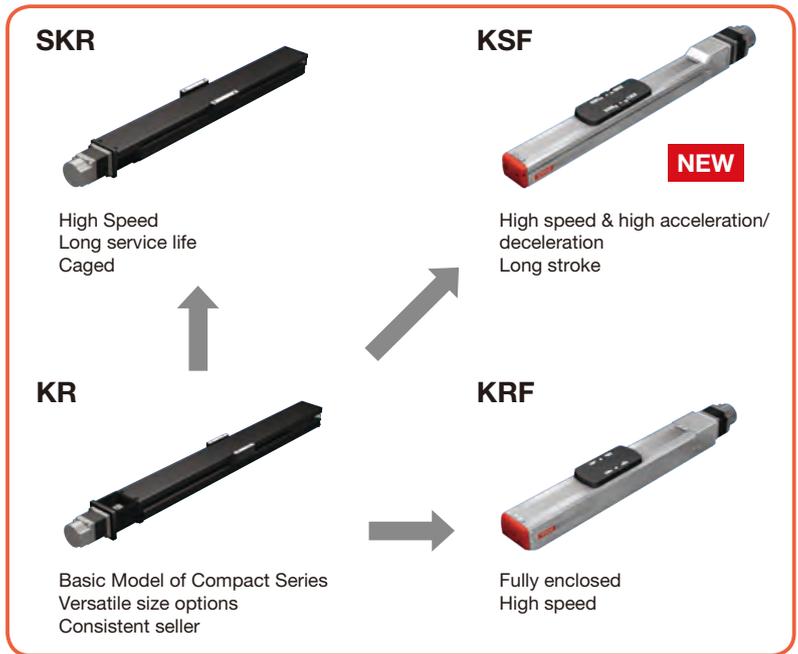

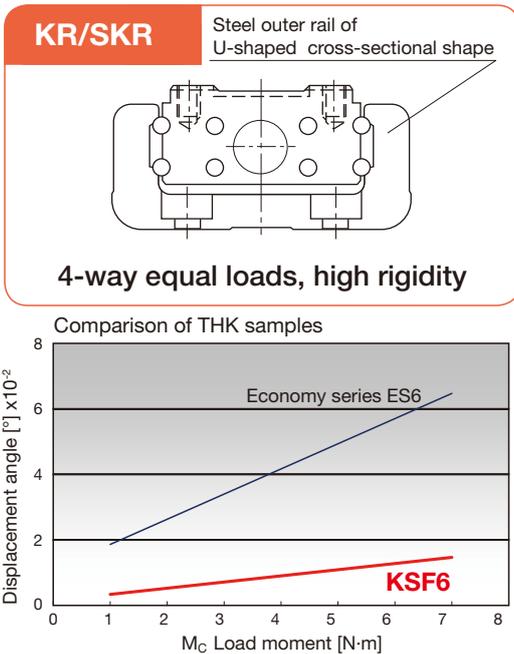

**Board Mounting Device** Processing / Assembly  
 Model Number Used: KSF, LM guide  
 KSF is used to enable the high-speed and high-precision positioning of the board mounting device.

**Pallet Changer** Transport  
 Model Number Used: KSF, LM guide  
 2 stacked KSF units are used for the changer. This makes for more compact and rigid units than conventional multi-jointed robots.

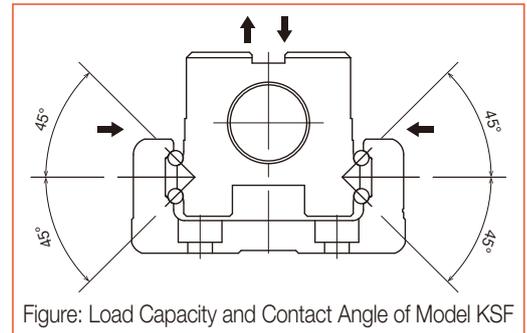

## Features and Lineup of the Compact Series

Use of a steel outer rail with a cross-sectional U shape enables to receive larger moment.

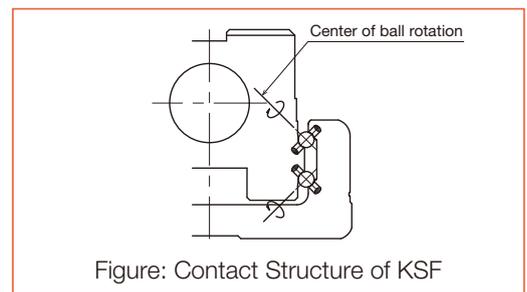

## 1 4-way Equal Load

Each row of balls is arranged at a contact angle of 45° so that the rated load on the inner block is uniform under loads applied to the inner block in the four directions (radial, reverse radial and lateral directions). As a result, model KSF can be used in any mounting orientation.

## 2 High Accuracy

Since the linear guide section consists of 4 rows of circular-arc grooves that enable balls to smoothly move even under a preload, a highly rigid guide with no clearance is achieved. Additionally, variation in frictional resistance caused by load fluctuation is minimized, allowing the system to follow highly accurate feed.

## 3 High Rigidity

Use of an outer rail with a U-shaped cross section increases the rigidity with respect to moment and torsion.

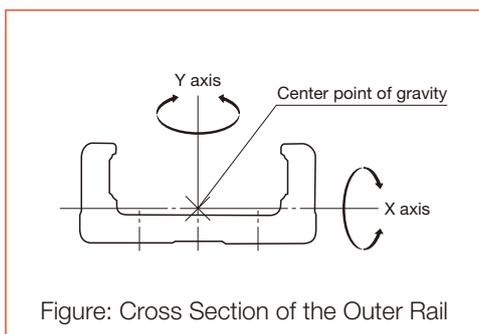

Table: Cross-sectional Characteristics of the Outer rail

Model	I <sub>x</sub> [mm <sup>4</sup> ]	I <sub>y</sub> [mm <sup>4</sup> ]	Weight [kg/m]
KSF4	6.1 × 10 <sup>3</sup>	6.2 × 10 <sup>4</sup>	2.6
KSF5	1.7 × 10 <sup>4</sup>	1.5 × 10 <sup>5</sup>	3.9
KSF6	2.7 × 10 <sup>4</sup>	2.8 × 10 <sup>5</sup>	5.0
KSF8	8.4 × 10 <sup>4</sup>	8.9 × 10 <sup>5</sup>	9.0
KSF10	2.2 × 10 <sup>5</sup>	2.3 × 10 <sup>6</sup>	15.0

I<sub>x</sub>= geometrical moment of inertia around X axis  
I<sub>y</sub>= geometrical moment of inertia around Y axis

## Compact Series KSF Features

# 1 Increased Rated Output of the Applicable Motors

Ball screw shaft size was enlarged with the same compact outer rail unit. Shaft end was also enlarged which allows the use of larger size motors compared to THK actuators of the same size.

This allows high-speed, high-acceleration/deceleration operation which improves process time.

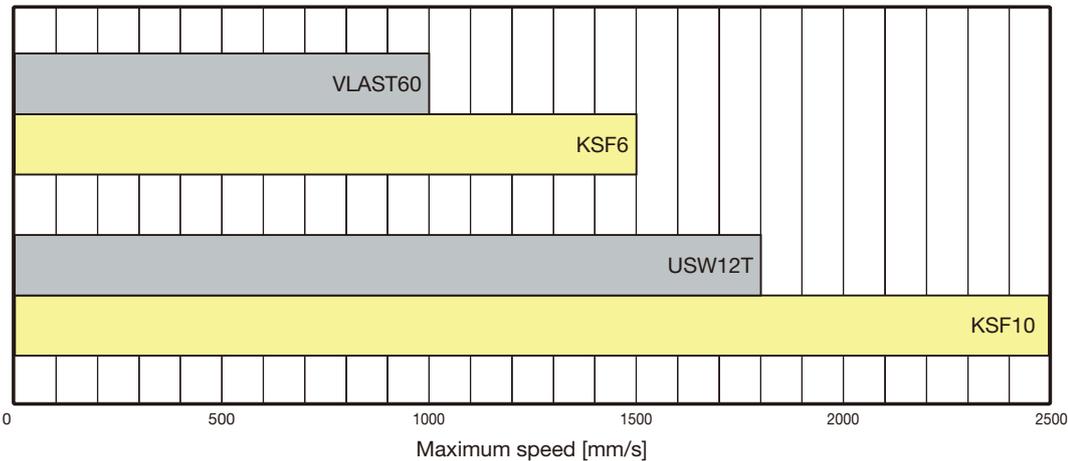

Model	Motor rated output (W)	Model	Motor rated output (W)	Model	Motor rated output (W)	Model	Motor rated output (W)
<b>KSF4, KSF5</b>	<b>100</b>	<b>KSF6</b>	<b>200</b>	<b>KSF8</b>	<b>400</b>	<b>KSF10</b>	<b>750</b>
VLAST45	30	VLAST60	100	US8T	150	USW12T	200

# 2 High speed & high acceleration/deceleration

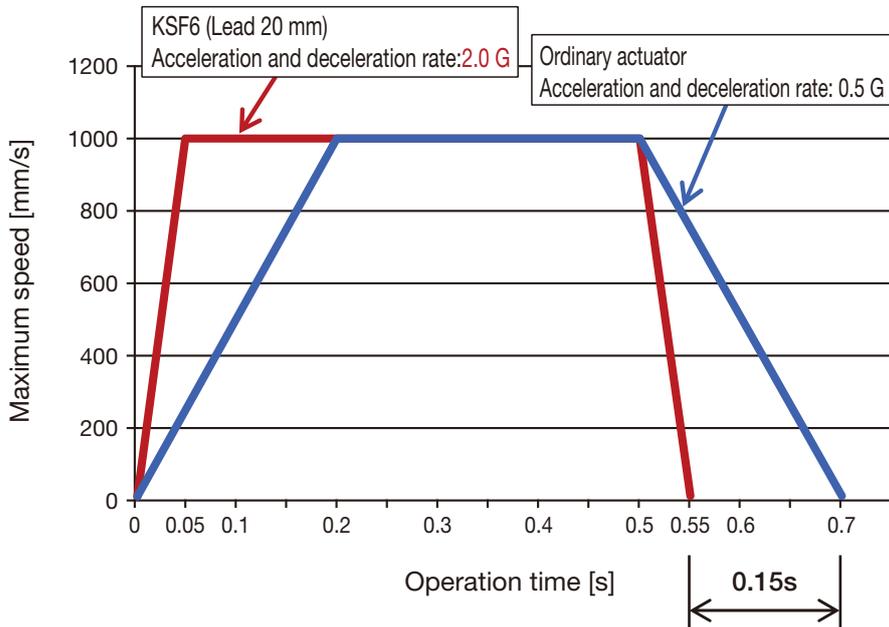

**Maximum speed 2,500 mm/s Maximum acceleration/deceleration 2 G**

Larger lead of the ball screw has achieved the maximum speed of 2,500 mm/s. (\*For KSF10, lead 50)  
Using a larger rated output motor allows for the high-acceleration/deceleration conveyance. (Up to 2 G)

### Max. speed comparison between KSF and other THK products

### Reduced process time through high-acceleration operation

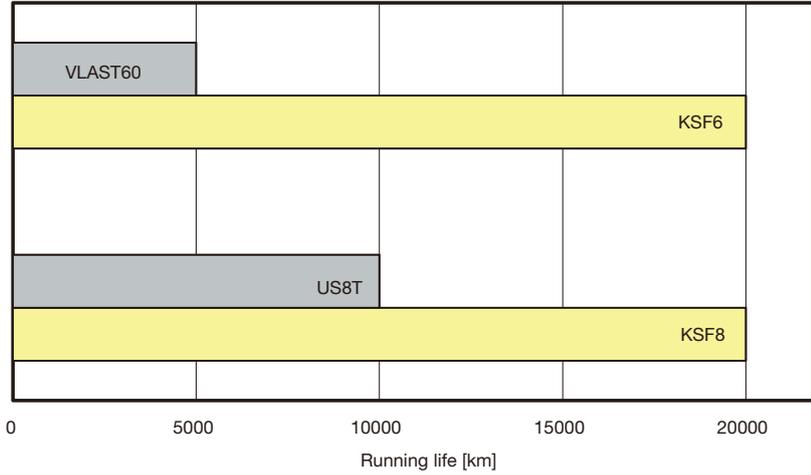

Process time reduced by 0.3 seconds per cycle (500 mm stroke)  
Process time reduced by 30 seconds per 100 cycles, for roughly 20% increase in productivity

### 3 Long service life **20,000 km**

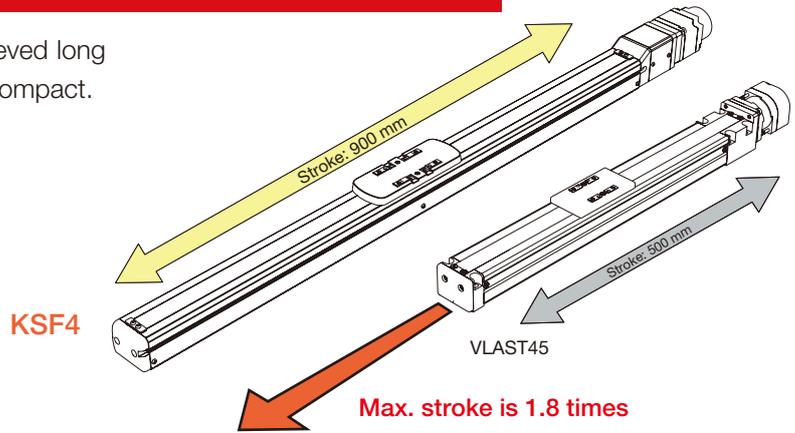

The long life of 20,000 km running life (10,000 km running life for KSF4 and KSF5 lead 10 mm) was made possible at the maximum load capacity by increasing the basic dynamic load rating of the LM guide unit and the ball screw unit.

Running life comparison between KSF and other THK products

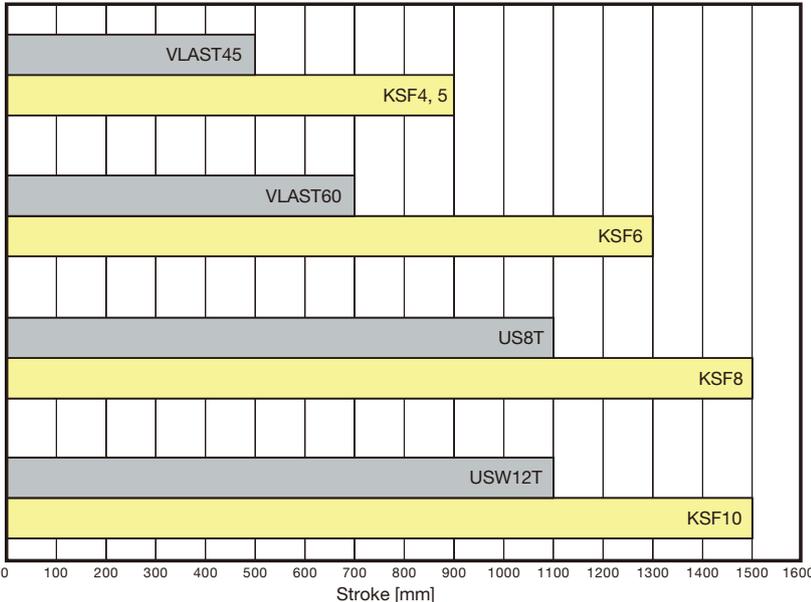

### 4 Long stroke **Maximum stroke 1,500 mm**

The larger ball screw shaft diameter has achieved long stroke operations while keeping the product compact.

Max. stroke comparison between KSF and other THK products

# 5 Long-term maintenance-free operation

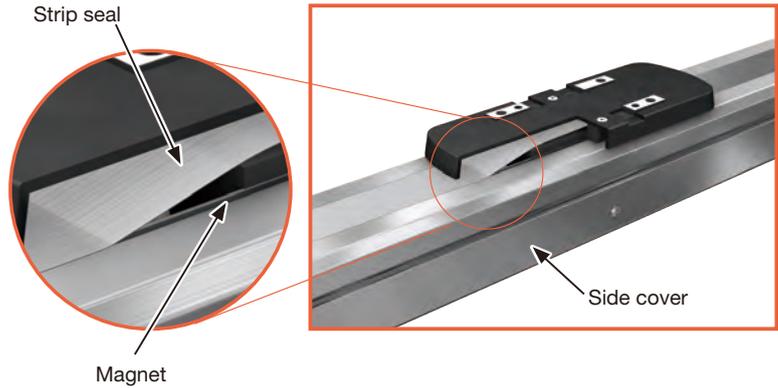

Lubricator QZ, which supplies the right amount of lubricant, adopted as the standard feature allows for long-term maintenance-free operations.

# 6 Fully enclosed design Reduced dust generation

Strip seal and top of side cover are magnetically sealed which provides a fully enclosed structure. It prevents failure by foreign matters getting inside. By avoiding sliding with the top surface of the strip seals, there is low particle generations.

### Magnetic attraction method

The magnet built in the side cover attracts the strip seal and prevents it from lifting, reducing the development of clearance.

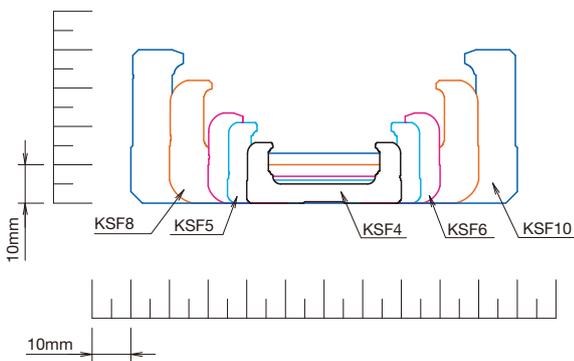

# 7 Versatile lineup

KSF10 has been added to the lineup for a total of 5 models.

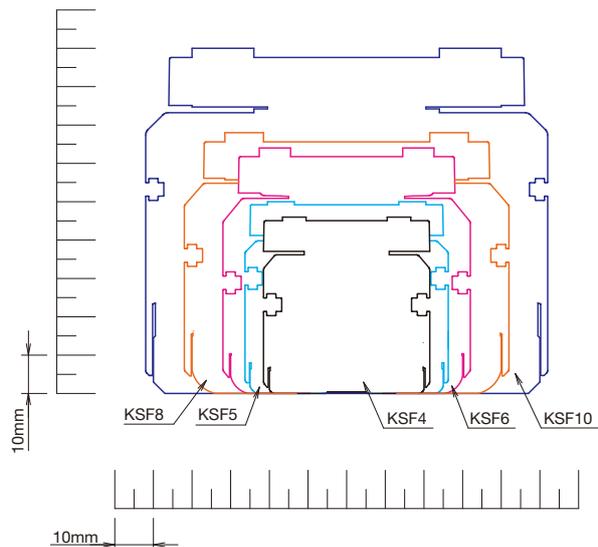

Open cover and top cover specifications have recently been added for even easier maintenance and mounting. Furthermore, motor wrap type for compact length and back-tapped type that can be mounted without removing the cover have been added, allowing selection to suit the application.

Moreover, motors from various manufacturers can be mounted, allowing users to operate with familiarized control methods.

# 8 Compact & Lightweight

Sectional dimensions 67% down, weight 37% down

When compared with other THK actuators using motors of the same rated output, KSF4 is approximately 45% more compact and 11% lighter in weight than VLAST60 models, while KSF8 is approximately 67% more compact and 37% lighter in weight than USW16T models.

## Option

### ☐: Sensors

Optional proximity sensors and photo sensors are available for KSF. Please use the sensor with the following precautions (Notes 1 to 3) in mind.

- Note 1) Types without motor will be shipped with the sensor and the sensor dog.
- Note 2) If proximity sensors are placed too close to each other, they may not work properly. In this case, the customer must provide sensors with variant frequencies. (For specifications, contact each manufacturer.)
- Note 3) Mount two sensor dogs or sensor rails for 50 mm strokes.

N.O. contact: Normally open contact point

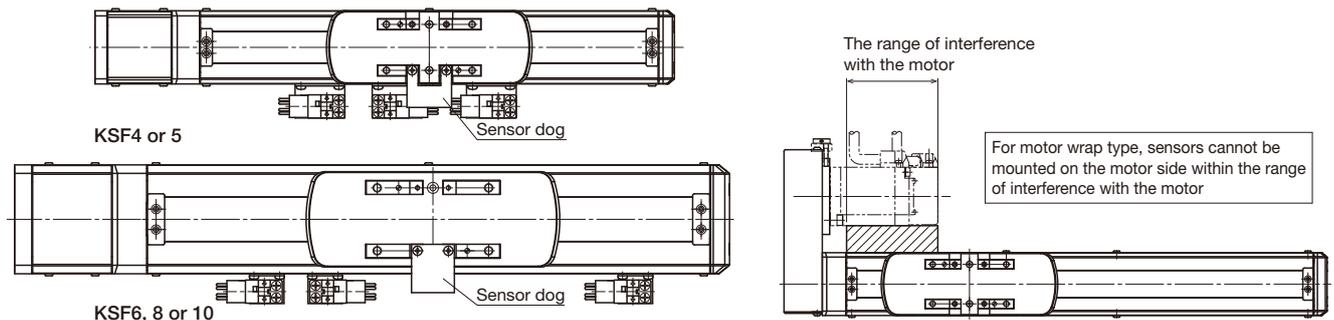

N.C. contact: Normally closed contact point

Sensors marked with a symbol "M", if combined with our controller, cannot be used as a home position sensor.

\*1 Sensor rails are included for Top Cover and Open Cover specification types only.

\*2 Selectable only for Top Cover and Open Cover specification types.

\*3 The photo sensors can be switched between ON when lit and ON when unlit.

## Motor mounting plate for motor wrap option

### Wrap symbol configuration

Motor wrap components are available to mount various kinds of motors.  
Specify the wrap symbol corresponding to the motor used.

## Load Ratings in All Directions and Static Permissible Moment

### Equivalent Load (LM Guide Unit)

The equivalent load when the LM Guide unit of model KSF simultaneously receives loads in all directions is obtained from the following equation.

$$P_E = P_R(P_L) + P_T$$

- P<sub>E</sub> : Equivalent load [N]
  - Radial direction
  - Reverse radial direction
  - Lateral directions
- P<sub>R</sub> : Radial load [N]
- P<sub>L</sub> : Reverse radial load [N]
- P<sub>T</sub> : Lateral load [N]

#### ● LM Guide Unit

Model KSF is capable of receiving loads in four directions (radial, reverse radial and lateral directions). Its basic load ratings are equal in all four directions (radial, reverse radial and lateral directions), and their values are indicated in Table: KSF Rated Loads.

#### ● Ball Screw Unit

Since the inner block is incorporated with a ball screw nut, model KSF is capable of receiving an axial load. The basic load rating value is indicated in Table: KSF Rated Loads.

#### ● Bearing Unit (Fixed Side)

Since housing A contains an angular bearing, model KSF is capable of receiving an axial load. The basic load rating value is indicated in Table: KSF Rated Loads.

## Service Life

KSF is comprised of an LM guide, ball screw and retention bearing. The service life of each component can be obtained using the basic dynamic load rating indicated in P.154 Table: KSF Rated Loads.

### LM Guide Unit

#### [Nominal Life]

$$L = \left( \frac{f_c \cdot C}{f_w \cdot P_c} \right)^3 \times 50$$

L : Nominal Life [km]

(this is the distance 90% of a group of the same LM guides can travel when operated individually under the same conditions)

C : Basic dynamic load rating [N]

P<sub>c</sub> : Calculated applied load [N]

f<sub>w</sub> : Load factor ("Table: Load factor (f<sub>w</sub>)" serves as a reference)

f<sub>c</sub> : Contact factor ("Table: Contact factor (f<sub>c</sub>)" serves as a reference)

- If a moment is applied, calculate the equivalent load by multiplying the applied moment by the equivalent factor indicated in "Table: Moment Equivalent Factors (K)".

$$P_m = K \cdot M$$

P<sub>m</sub> : Equivalent load (per 1 block) [N]

K : Equivalent moment factor ("Table: Moment Equivalent Factors (K)" serves as a reference)

M : Applied moment [N·mm]

(If planning to use the product with a wide inner block span, contact THK.)

- If a radial load (P) and a moment are simultaneously applied to model KSF

$$P_E = P_m + P$$

P<sub>E</sub> : Overall equivalent radial load [N]

Perform a nominal life calculation using the above data.

#### [Service Life Time]

When the nominal life (L) has been obtained, the service life time is obtained using the following equation (if the stroke length and the number of reciprocations per minute are constant).

$$L_h = \frac{L \times 10^6}{2 \cdot \ell_s \cdot n_1 \times 60}$$

L<sub>h</sub> : Service life time [h]

ℓ<sub>s</sub> : Stroke length [mm]

n<sub>1</sub> : Number of reciprocations per minute [min<sup>-1</sup>]

## Ball Screw Unit/Bearing Unit(Fixed Side)

### [Nominal Life]

$$L = \left( \frac{C_a}{f_w \cdot F_a} \right)^3 \times 10^6$$

L : Nominal Life [rev]

(The nominal life (L) means the total travel distance that 90% of a group of units of the same Ball Screw (bearing) can achieve without flaking after individually running under the same conditions.)

$C_a$  : Basic dynamic load rating [N]

$F_a$  : Axial load [N]

$f_w$  : Load factor ("Table: Load factor ( $f_w$ )" serves as a reference)

### [Service Life Time]

When the nominal life (L) has been obtained, the service life time is obtained using the following equation (if the stroke length and the number of reciprocations per minute are constant).

$$L_h = \frac{L \cdot \ell}{2 \cdot \ell_s \cdot n_1 \times 60}$$

$L_h$  : Service Life Time [h]

$\ell_s$  : Stroke length [mm]

$n_1$  : Number of reciprocations per minute [ $\text{min}^{-1}$ ]

$\ell$  : Ball screw lead [mm]

### [ $f_w$ : Load Factor]

In general, machines in reciprocal motion are likely to cause vibration and impact during operation, and it is particularly difficult to accurately determine each of vibration generated during high-speed operation, impact applied during repeated starting and stopping in normal use, etc. Therefore, where the effect of speed vibration is estimated to be significant, divide the basic load rating (C) by an empirically obtained load factor.

### [K: Moment Equivalent Factor (LM Guide Unit)]

When model KSF travels under a moment, the distribution of load applied to the LM Guide is locally large. In such cases, calculate the load by multiplying the moment value by the corresponding moment equivalent factor indicated in Table.

Symbols  $K_A$ ,  $K_B$  and  $K_C$  indicate the moment equivalent loads in the  $M_A$ ,  $M_B$  and  $M_C$  directions, respectively.

Table: Load Factor ( $f_w$ )

Vibration / Impact	Velocity (V)	$f_w$
Tiny	For tiny speeds $V \leq 0.25$ m/s	1 to 1.2
Weak	For low speeds $0.25$ m/s < $V \leq 1$ m/s	1.2 to 1.5
Medium	For medium speeds $1$ m/s < $V \leq 2$ m/s	1.5 to 2
Strong	For high speeds $V > 2$ m/s	2 to 3.5

Table: Equivalent Moment Factors (K)

Model	$K_A$	$K_B$	$K_C$
KSF4	$1.37 \times 10^{-1}$	$1.37 \times 10^{-1}$	$7.9 \times 10^{-2}$
KSF5	$1.34 \times 10^{-1}$	$1.34 \times 10^{-1}$	$6.0 \times 10^{-2}$
KSF6	$1.03 \times 10^{-1}$	$1.03 \times 10^{-1}$	$4.9 \times 10^{-2}$
KSF8	$6.7 \times 10^{-2}$	$6.7 \times 10^{-2}$	$3.6 \times 10^{-2}$
KSF10	$5.7 \times 10^{-2}$	$5.7 \times 10^{-2}$	$2.9 \times 10^{-2}$

$K_A$ : Moment equivalent factor in the  $M_A$  direction.

$K_B$ : Moment equivalent factor in the  $M_B$  direction.

$K_C$ : Moment equivalent factor in the  $M_C$  direction.

# Precautions on Use

## ● Operation

- Do not unnecessarily disassemble the actuator or control devices. Doing so may allow foreign objects to enter or reduce functionality.
- Do not drop or knock the actuator or control devices. Doing so may cause injury or damage the unit. If the product is dropped or impacted, functionality may be reduced even if there is no surface damage.
- If the product will be used in location exposed to vibrations or in special environment such as vacuum/clean-room, and/or high/low temperatures, contact THK.
- Tilting the table or the outer rail may cause them to fall by their own weight.

## ● Environment

Wrong environment can cause failures of the actuator and control devices. The best place to use the product is as follows:

- Actuator: A place with an ambient temperature from 0 to 40°C and humidity of 80% RH or lower that will not expose the product to freezing or condensation.
- Controller: A place with an ambient temperature from 0 to 40°C and humidity of no more than 90% RH that will not expose the product to freezing or condensation.
- A place free from corrosive gas and flammable gas.
- A place free from electrically conductive powder (such as iron powder), dust, oil mist, moisture, salt, and organic solvent.
- A place free from direct sunlight and radiant heat.
- A place free from strong electric and magnetic fields.
- A place where vibration or impact is not transmitted to the unit.
- A place that is easily accessible for service and cleaning purposes.

## ● Safety Precautions

- When the actuator is in motion or about to be in motion, do not touch any moving parts. Do not go near the actuator when it is in motion.
- Before performing installation, adjustment, checking, or services regarding the actuator and the connected peripherals, ensure that all power is disconnected. In addition, take countermeasures to prevent anyone other than the operator from turning on the power.
- If two or more people are involved in the operation, confirm the procedures such as sequences, signs, and abnormalities in advance, and appoint another person for monitoring the operation.
- Before operation, please read thoroughly and obey "Manipulating industrial robots - Safety" (JIS B8433) and "Ordinance on Industrial Safety and Health" (Ministry of Health, Labor and Welfare).
- Operation of the actuator over the torque limit value leads to damage of parts or injury. Please keep the parameter torque limit settings within the allowable torque.
- Although a stopper is installed inside the product, it is intended to limit the stroke and therefore may be damaged in case of a hard collision.

## ● Lubrication

- Thoroughly wipe-off the anti-rust oil before using the product.
- In order to effectively use the KSF, lubrication is required. Insufficient lubrication may increase abrasion on moving parts and shorten service life.
- Do not use a mix of lubricants with different physical properties.
- Please contact THK if using special lubricants.
- When adopting oil lubrication method, contact THK.
- The greasing interval may vary depending on the usage conditions, so THK recommends determining a greasing interval during the initial inspection.

## ● Storage

- When storing the actuator, enclose it in a package designated by THK and store it in a horizontal position away from abnormally high or low temperatures and high humidity.
- When storing the control devices, avoid abnormally high or low temperatures and high humidity.
